# SORTCERTIS

BY RUNTIME EROR

DESCRIPTION

We have been working on a project that is to create an app on android studio. We have used java as our programming language. In this app the user can upload any kind of certificates in image jpg format Date of issue is something which every certificates do contain. This app will scan the certificate uploaded and would extract the date of issue of the certificate from it and would automatically arrange the certificates by sorting it. This arranged form of all the certificates uploaded by the user in accordance with the date of its issue would help the user find a particular certificate in no time.
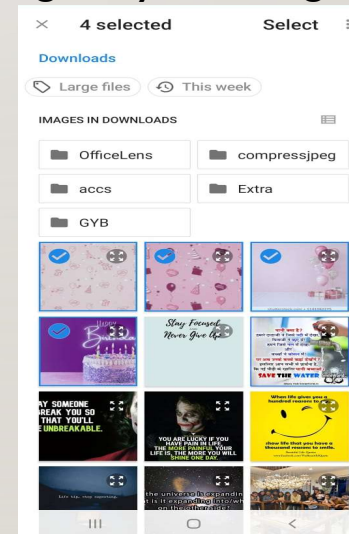

WORKING

Start-up page

Inside view

Here the user would access image from phone gallery or using camera

My Application

PRIMARY	SECONDARY
COLLEGE	JOB
EXTRA CERTIFICATES	

PARTICIPATION
ACHIEVEMENT

EXTRACTION OF DATE

For further organisation of all the certificates uploaded by the user ,the app will extract the date of issue from the certificates and sort them up for best arrangement.
